

Hippocrates AI

Milestone Asset: First Successful Public Experiment

Milestone Overview

Name of Milestone: First Successful Public Experiment

Budget: ₦3,500,000.00

Duration: 180 days

Description

As much as we are business, we also take seriously Research and Development. Google Deepmind that is behind Google's Artificial Intelligence infrastructure started as a research company. Hence, with experiments, we can find better solutions to help students learn. The first experiment we are running is the impact of Hippocrates AI on students who are preparing for the 2027 JAMB. The aim of this is to learn the direct impact of our application and the metrics from it on standardized tests. The experiment's report serves as validation and a unique selling point for further market penetration. To do these experiments require a funding runway.

Expected Deliverables

- 1. A comprehensive research report detailing the impact of Hippocrates AI on 2027 JAMB candidates.
- 2. Statistical validation of the platform's effectiveness on standardized test scores.
- 3. Marketing and sales assets derived from the experiment data to support institutional procurement.
